

**Orange Legal Technologies' Analytics Services** help identify and eliminate irrelevant document sets early in the audit, investigation, or litigation process. This capability is provided by our internally developed, best-of-breed technology - the OneO® Discovery Platform.

## **Our OneO® Analytics Services include:**

- Data Preparation and Indexing (Ingestion/Normalization/Indexing)
- Data Reduction and Organization (Culling/Filtering of Indexed Data)
- Early Data Assessment (Cost Estimation/Meet and Confer Planning)
- Rapid Processing and Review Services (Integrated Platform)

## **We support these OneO® Analytics Services with:**

- Secure Hosted Repositories
- Intuitive Web Based User Access
- Integrated Collaboration/Workflow
- Extensive/Customizable Reporting
- Dedicated Project Management Expertise

## **Client Data Ingestion**

OrangeLT™ has the capability to ingest data into our OneO® Discovery Platform from all major standard storage media formats and common load file formats – whether proprietary or based on industry standard data transfer protocols. Ingestion of client data into OneO® begins with Data Staging. Data Staging is the process by which original ESI files are copied, isolated, and stored in a forensically sound manner for use. This data staging occurs in three phases:

1. Copying/storage of original ESI files on a closed/isolated network file server.
2. Storage of original media and ESI files in a secure media repository.
3. Storage of copied ESI files for use in further electronic discovery processing.

From this data staging, data is “pointed to” by our data transport utility and chain of custody information is entered into OneO® (date collected, date received, custodian, media id, processing technician, description, notes) so that the information can be associated with every document throughout all further stages of the electronic discovery process. *Historical experience shows that average expansion volumes after further processing is approximately 125% for e-docs and 175% for e-mail.*

## **Client Data Analytics (Early Data Assessment)**

**Analytics/Filtering:** OneO® Analytics capability is fully accessible by the client and any number of key word searches, date filters, metadata filters, or full inclusions/exclusions may be performed. *Ideal volume reduction rates through Analytics are 50% - 80%, though naturally the actual rates vary from 0% – 99% depending on the nature of the case and the amount of filtering desired.*

## **Post Analytics eDiscovery**

After completion of data analytics, filtered data is immediately available for further processing and review within the OneO® Discovery Platform. Alternatively, filtered data can also be directly exported into any non-OneO® processing and/or review tool at this phase.
