

Collection | Analytics | Processing | Review | Production

Orange Legal Technologies' Collection Services can help you rapidly and accurately inventory and acquire potentially relevant print and electronically stored information (ESI) files for audits, investigations, and/or litigation.

Our Collection Services include:

- Automated Network Discovery of Devices/Repositories and Data
- Fixed Storage Collection (Manual+Active Data Copy/Forensic Imaging)
- Portable Storage Collection (Manual Copy/Forensic Imaging)
- Back Up Tape Restoration

We support these Collection Services with:

- Certified Collection Experts
- Collection and Planning Consulting
- Defensible Chain of Custody Procedures and Processes

The Client Data Inventory

As part of initiating a project with Orange Legal Technologies, a full inventory of client print and ESI files is undertaken using a framework of OrangeLT™ experience in the migration of both print and ESI files into the OneO® Discovery Platform for the forensically sound conduct of electronic discovery.

This inventory includes the following items to ensure a complete assessment of potential client needs:

- Is any of the client's data encrypted?
- What is the scope of the client's data?
- What is the structure of the client's data?
- What is the data format of the client's data?
- How is the client's data "interconnected"?
- How does the client access active state data?
- How does the client maintain static state data?
- How much of the client's data will be acted upon?
- What media may need to be examined and potentially collected?

The Client Data Collection

Upon completion of the data inventory and coupled with an understanding via client agreement on the scope of the data collection as it relates to print and/or electronic media, OrangeLT™ then utilizes the best available collection methods to ensure a proper data collection process is followed. This collection process includes the use of capabilities that allow for Automated Network Discovery of Devices/Repositories and Data, Fixed Storage Collection, Portable Storage Collection, and/or Back Up Tape Restoration.

Post Collection eDiscovery

Once the data collection plan is executed, OrangeLT™ can then conduct a data ingestion exercise to ensure all collected data is transferred in a chain-of-custody proven, forensically sound manner into the OneO® Discovery Platform - our integrated, web-accessible (SaaS) electronic discovery platform that enables online analytics, processing, and review of data from the security of a hosted centralized repository.
