

Orange Legal Technologies' Review Services provide you with the ability to define and examine a data set of documents for relevance, responsiveness, privilege, and/or confidentiality. With the ability to load data files prepared from our own processing platform or processing platform of your choice, our review services are powered by the OneO® Discovery Platform.

Our OneO® Review Services include:

- **Foreign Language Support** - is enabled through integrated Unicode Consortium standards and covers 52 worldwide writing systems allowing for the scoping, searching, and review of data sets without the requirement for additional modules or services.
- **Web Based User Access** - allows for secure access of data sets and the full conduct of review from any geographical location with Internet access without the requirement for additional client-side applications or programs. This capability allows for the use of geographically dispersed review teams that can be quickly pulled together virtually to manage and complete time-sensitive, coordination-intensive review requirements.
- **Integrated Collaboration** - increases the collective experience and knowledge of legal review teams while decreasing the time it takes to communicate and coordinate review issues.
- **Integrated Workflow** - allows for the proper coordination of documents, reviewers, and technology by allowing for the automation of review processes to include reviewer roles, responsibilities, tasks and timelines.
- **Audit and Reporting** - allows users to customize and automate review reports to support both scheduled and real-time status updates.

Our OneO Discovery Platform® provides users with increased efficiency and decreased risk based on:

- **Implementation** - quickly deploy, customize, and securely access a hosted data repository that may immediately be used by multiple individuals from multiple locations to analyze and review data.
- **Centralization** - allows for time efficient complex searches against large volumes of documents from a centralized electronic discovery platform architecture.
- **Defensibility** - chain of custody tracking down to the file level, to include extracted compound files and embedded files, throughout the discovery process ensures that both the discovery process and the data are defensible.
- **Scalability** - provides capability to take full advantage of all available processing power regardless of the size of the data set being reviewed or the complexity of the review queries. The investment protection provided by scalable and centralized server architecture ensures that growing capacity requirements do not adversely affect electronic discovery capability.
- **Security** - provides for secure online access to a centralized hosted and secure data repository with forensically sound processes and protocols to ensure both physical and digital security.
- **Usability** - developed using industry accepted and user understood graphical user interface metaphors to ensure easy and intuitive use by end users.

We Support these OneO® Processing Services with:

- Secure Hosted Repositories
- Scalable Review Platform
- Dedicated Project Management/
- Immediate Customer Support (24x7)
